DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Group I, claims 1-34 and 66-68 in the reply filed on 5 January 2007 is acknowledged. The traversal is on the ground(s) that there is no serious burden to search the different groups. This is not found persuasive because, as previously indicated, the electrolytic processes of Group II are separately classified in class 205 from the structures for performing electrolytic reactions, which are classified in class 204. Thus, the Examiner has shown a serious burden for searching both groups, by showing that the two groups were separately classified.

The requirement is still deemed proper and is therefore made FINAL.

2. It is noted that a further election of species is required based on the disclosure and claiming of distinct species.

3. This application contains claims directed to the following patentably distinct species: (figure 1A) an electrolytic cell including a sacrificial material (claims 3-10 and 66-67); (figure 1B) an electrolytic cell where the electrode adjacent the reaction chamber was fluid permeable (claims 11-15); and (figure 2A) an electrolytic cell at least one of the electrodes forms a wall of the reaction chamber (claim 2). The species are independent or distinct because each has a distinct structure that operates in a different manner.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 2, 16-34 and 68 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions

Art Unit: 1742

unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
